Model 310-014
p/n 00REG-1018-02

GENERAL SPECIFICATIONS

Inlet Pressure Rating:	3000 PSI MAX
Regulated Output:	16 ± 2 PSI (Dynamic) (NOM 1 Bar) 20 ± 2 PSI (Static)
Average Open Flow Rate:	50 L/min (AVG)
Weight:	5.8 Oz. [164 g]
Spare O-ring:	MH p/n 09001-0011-90 (CGA-540 Inlet Nipple)
See also:	MH document 5SREG-310-xxx

Installing the Regulator

Seat the inlet nipple of the regulator into the corresponding outlet socket of the cylinder valve and turn the grip nut to engage the valve threads. Complete the connection by turning the grip nut **HAND TIGHT ONLY! DO NOT use a wrench or pliers. Over-tightening will damage the regulator.** The integrity of the connection is provided by an o-ring seal and is not dependant on the tightness of the threaded coupling. Connect the outlet tubing and assemble the remainder of your oxygen system (EDS unit or flowmeter). Open the cylinder valve **SLOWLY** (~ 2 turns).

Removing the Regulator

DO NOT ATTEMPT TO REMOVE REGULATOR WHILE UNDER PRESSURE

The regulator grip-nut will be difficult to turn while under pressure, and doing so will destroy the inlet O-ring. Bleed-off internal pressure by first **closing the main cylinder valve** and then:

- 1) If using an EDS device, disconnect the XCP-to-EDS Supply Adapter tubing from the EDS device and then insert it into the regulator XCP/FPR outlet fitting.
- 2) If using an MH-3 or MH-4 Flowmeter, simply connect the Flowmeter to the regulator XCP/FPR outlet and allow the remaining oxygen to bleed via the connected Flowmeter.
- 3) A blunt instrument (such as a pen) may be inserted into the regulator XCP/FPR outlet in order to open the internal check valve and bleed-off the remaining oxygen.

The grip nut should now turn easily **by hand** and the regulator can be removed.

OUTLET TUBING CONNECTION - CPC Quick-Connect Fittings

To insert:

Simply insert the male connector into the female outlet on the XCP/FPR regulator.

Push in firmly until the connector engages with a "**CLICK**" sound.

You now have a secure air-tight connection.

To remove:

Push in the side release button and the male connector will disengage with a "**POP**".

The internal check valve will close to stop the flow of oxygen.
